Hi Camille and Bob,

Bob's estimate regarding noisy machinery was not accurate. The heavy equipment at Lot 11 has been operating for three months now, and it's still going. A sample video is attached. The construction noise and ground-shaking vibration have been incredibly disruptive to the families and neighbors here in our area of the San Mateo Highlands. This morning my younger kid was awakened once again by the 'beep beep beep' sound of a bulldozer/loader. The community here in the Highlands has been tortured by this project for 2 years now. 2 years! What's the latest estimate for a project completion date?

Thanks,
Tom

Hi Tom,

Bob says 2 more weeks for noisy machinery (hopefully little to no jack hammering). He estimates 1-2 months to final project now that PG&E connection is progressing.

Thanks

Hi Bob and Camille,

Regarding the house on Lot 11, their new storm drain has been under construction for over a month now. Today the crew is jackhammering the street and sidewalks. The noise from the backhoes, power generators, and especially the jackhammers is ridiculously loud. It's very hard on those of us in the neighborhood who study and work from home.

My family and my neighbors' families have been listening to the construction noise from this house and the two houses at the end of Cobblehill Place for 2 years. That's a long time, and it's really been a nightmare for all of us in the neighborhood. Can you provide any timeline as to when these three houses will be complete?

Thank you,

Tom Finke

Good morning.

It sounds like what you're saying is rather than incur the cost to rent the appropriate and street-legal vehicle to transport this gravel and dirt between the lots - one time - the builder instead repurposed an excavator and used it as an inefficient hauler. Instead of a street-legal dump truck, they used the excavator shovel to transport shovelfuls of gravel and dirt, bit by bit over many hours, nonstop between the lots, back and forth across in front of our homes. Perhaps they already had an excavator and a laborer onsite and it was more expedient - for them - to do it this way. This sounds like corner-cutting by the builder, outside of the realm of accepted best practices, and possibly not even legal, to benefit their bottom line at the public's expense. The neighborhood has to incur this cost — undue wear and tear to the road, debilitating excessive and constant noise, loss of enjoyment, increased safety vigilance, safety risk, and strong potential

of gravel and rock damage to our parked cars. And we're expected to believe this is OK just because it didn't take place "outside of the allowed construction hours"?

I did not see brake lights, headlights, turn signal, license plate, or guide car. Half of the several dozen trips were done backwards without alert sounds. I do not believe this was even legal activity.

The county had no idea this was happening because there was no monitoring except from the public itself.

Thanks Dave. I spoke to Bob (the contractor) today regarding the back-and-forth backhoe trips. For the bioretention basins on Lots 9 and 10, he stored the gravel and dirt on Lot 11 and then had to transport them back to fill the basins on Lots 9 and 10. He is now done with the bioretention basins. He won't be storing any more materials on other lots and therefore won't need to go back-and-forth like he was. I asked him to comply with the construction hours and he says he has. The houses are nearing completion. Thank you for your patience.

Hello Camille, Steve, Amy, and Supervisor Pine,

On behalf of my family and a number of the neighboring families who live on New Brunswick Drive near the Chamberlain Group projects on Cowpens Way and Cobblehill Place, I'd like to agree with Dave Michaels, and mention that the ground-shaking construction noise lately has been very disruptive, especially because so many of us still work from home. Last week there were four heavy equipment vehicles including 2 backhoes working on the Cowpens house. We've been subjected to construction noise from these projects for almost two years(!) now, and it doesn't make sense that such major work is still occurring two years into the project timeline.

Regards,
Tom Finke and Christine Tam

Subject: Highlands noise and road use by builder

Dear Staff, Supervisor Pine (and neighborhood Bcc'd)

There has been a backhoe or other earth mover driving across Cobblehill and New Brunswick between the subject lot on an ongoing (and at times near-constant) basis. For example, dozens of times today alone. Between lots 9/10 to lot 11, it

drives backwards.

Does the permit allow for this kind of ongoing use of the roads between the subject lots?

Is this safe?

Is this necessary?

Is there a reason a second backhoe can't be used instead, in order to avoid this excessive road use and noise?

Thank you for your time and consideration.

Very truly yours,

Dave

Hi Tom,

Thanks for your feedback regarding Saturday work hours. Specifically, NOI 1.3 (construction hours) says (bold added for emphasis):

The grading and construction activity would be kept to the hours of 7:00 AM to 7:00 PM, Monday through Friday. Saturday hours (8:00 AM to 5:00 PM) are permitted upon the discretion of County approval based on input from nearby residents and businesses. **Saturday construction (8:00 AM to 5:00 PM) would be allowed once the buildings are fully enclosed.** Noise generating grading and construction activities shall not occur at any time on Sundays, Thanksgiving and Christmas.

In speaking with the Superintendent, the need for the generator last Saturday was unanticipated. I was able to obtain more information. While the Superintendent scheduled the work on Saturday, as permitted by NOI 1.3, he did not anticipate the subcontractor's use of the pneumatic nail gun (which needed the use of the generator), as the County's Nailing Inspection for the Lath was already completed and passed. The subcontractor was finishing up some loose ends. As the Superintendent was not present at the site, this took him by surprise as well. As he stated to me last week, he will not be running the generator on Saturdays until the job is complete.

We appreciate your patience and will continue to try to work together the best we can until this project is completed.

Thank you

Subject: Re: Complaint about noise from new house construction at San Mateo Highlands Lot 11

Hi Camille,

Thanks for following up and for gathering this information. Some information you've received may not be accurate, because the generator is not in the garage, it's in the front yard. You can see it in the YouTube video I provided below. Here's the link again <https://youtu.be/5TzbWakYRCs>. The date of this video is Saturday May 8.

NOI-1.3 says: "construction activity would be kept to the hours of 7:00 AM to 7:00 PM, Monday through Friday. Saturday hours (8:00 AM to 5:00 PM) are permitted upon the discretion of County approval based on input from nearby residents". The County did not ask for input from me or from other nearby residents regarding the Saturday work hours (and in general my neighbors and I do not approve of the Saturday work hours). If the County has permitted Saturday work hours without asking for input from nearby residents, isn't that a violation of NOI-1.3?

Thanks,

Tom

Hi Tom,

I spoke with Jessie and Bob today and this is what I learned. Regarding use of generators and NOI 1.2 (use of electrically powered equipment), generators are needed as PG&E service is extremely delayed; unfortunately, the houses are likely going to be connected to electricity just prior to final of the building permits. Bob has done as much as he could to get the houses to get connected earlier.

The generator that is being run now is the stucco subcontractor's generator; stucco will likely be done this week. The plastic needed to contain stucco drips in the backyard prevents the generator from also being located in the backyard, as workers could be asphyxiated by generator fumes. Therefore, the generator is located for now in the garage.

After the stucco is completed, Bob will still need a generator but it will be located in the backyard again.

Regarding NOI 1.3 (construction hours), Bob said that last Saturday, he was not on-site, and workers may have used the radio or the generator. He said that he has asked the workers not to use their radio and he says he will not be running the generator on Saturdays until the job is complete. Construction should be completed by the end of the month.

Thank you for your patience

Subject: Re: Complaint about noise from new house construction at San Mateo Highlands Lot 11

Hi Camille,

[copied on this email are some of my nearby neighbors in the Highlands who are most affected by this issue]

After my previous email in March, there were quite a few more days when the Chamberlain Group's workers were using a gasoline-powered generator in the same unenclosed noisy fashion, but I didn't mention it because I want the house construction to be completed as soon as possible. But this past Saturday morning, the noise level was just unacceptable again.

This video will give you an idea of how loud it is: <https://youtu.be/5TzbWakYRCs>. It sounds a lot louder in person.

Since this is my third formal complaint regarding Chamberlain Group's violation of mitigation measures NOI-1.2 and NOI-1.3, what penalties can the County impose on Chamberlain Group for repeated violations?

Thanks,

Tom

Subject: RE: Complaint about noise from new house construction at San Mateo Highlands Lot 11

Hi Tom,

I spoke with Bob this morning. He's going to be done with the generator today for a while. He will be doing drywall taping over the next 8-10 days which will not need the generator. When he starts the generator back up after the drywall taping, he will move it to the backyard. He will keep the radio noise down.

Thanks

Subject: Re: Complaint about noise from new house construction at San Mateo Highlands Lot 11

Hello Camille and Bob (I don't have Jessie's email address),

Once again I'm writing to complain about noise from the new house construction project on Lot 11 in the San Mateo Highlands, next to my house at 2067 New Brunswick Drive.

Over the past several days, the workers on site have been using a gasoline-powered generator in front of the house again. On top of that they are playing music at a volume loud enough to be heard over the generator, which is already loud.

Apparently Nexgen Builders don't know or don't care what their workers are doing on site. Please ask them again to move the generator either inside the house or to the back of the house - this fixed the noise problem sufficiently last time.

My family and my neighbor's family are all still working and studying from home due to the pandemic, so the additional noise is really having a negative impact on us.

Thank you,

Tom

Subject: Complaint about noise from new house construction at San Mateo Highlands Lot 11

Hello Bob and Camille,

I'm writing to complain about the construction noise from the new house construction project on Lot 11 in the San Mateo Highlands, next to my house at 2067 New Brunswick Drive. My family has endured five months of

construction noise so far, which has been particularly painful due to the Covid-19 pandemic, since my wife and I are both working from home, and both of my children are attending school online at home.

At this point, the noise of the gasoline-powered generator used by the construction crew day after day has become unacceptable. This video link will give you an idea of how loud it is: <https://youtu.be/6zACU6BQY-U>. Every day. While my kids are trying to attend school.

This past Saturday I spoke in person onsite with Bob about the noise. He indicated it may be months before Nexgen Builders are able to run a power line from the nearest utility pole, so he suggested in the meantime moving the generator to the back of the house, which should decrease the noise level. Today is Thursday, and the generator has not been moved.

The Highlands Estates project conditions of approval document contains the following items:

Mitigation Measure NOI-1:

The Project Applicant shall require that the following noise reduction practices be implemented by including them in the contractor construction documents:

- 1. Equipment and trucks used for project grading and construction would utilize the best available noise control techniques (e.g. improved exhaust mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically-attenuating shields or shrouds) in order to minimize construction noise impacts.*
- 2. Equipment used for project grading and construction would be hydraulically or electrically powered impact tools (e.g. jack hammers and pavement breakers) wherever possible to avoid noise associated with compressed air exhaust from pneumatically-powered tools. Compressed air exhaust silencers would be used on other equipment. Other quieter procedures would be used such as drilling rather than impact equipment whenever feasible.*
- 3. The grading and construction activity would be kept to the hours of 7:00 AM to 7:00 PM, Monday through Friday. Saturday hours (8:00 AM to 5:00 PM) are permitted upon the discretion of County approval based on input from nearby residents and businesses. Saturday construction (8:00 AM to 5:00 PM) would be allowed once the buildings are fully enclosed. Noise generating grading and construction activities shall not occur at any time on Sundays, Thanksgiving, and Christmas.*
- 4. Residential property owners within 200 feet of planned construction areas shall be notified of the construction schedule in writing, prior to construction; the project sponsor shall designate a "disturbance coordinator" who shall be responsible for responding to any local complaints regarding construction noise; the coordinator (who may be an employee of the developer or general contractor) shall determine the cause of the complaint and shall require that reasonable measures warranted to correct the problem be implemented; a telephone number of the noise disturbance coordinator shall be conspicuously posted at the construction site fence and on the notification sent to neighbors adjacent to the site.*

I can prove that each one of these items has been violated. But before we go down that legal road, how about at least moving the gasoline-powered generator to the back of the house.

Thank you,

Tom
